A Letter from Azari Solenne

Welcome.

Before beginning this protocol, I want to clarify something that often gets distorted in conversations about power, communication, and influence.

Authority is not domination, volume, emotional force, or the ability to control a room through pressure, performance, or relational over-functioning.

The Authority Framework approaches authority as regulated presence, precise language, ethical influence, and relational command.

For many high-functioning women, communication has been shaped by accommodation, apology, over-explanation, conflict avoidance, strategic softness, or the pressure to remain acceptable while still being effective. Those adaptations may have been intelligent. Some may still be useful. But they cannot remain unexamined if authority is going to become governed rather than performed.

This protocol exists to examine that architecture.

You will look at the biological state underneath communication, the personas that emerge under threat, the integrity filter that should govern speech before execution, and the verbal structures that either dilute or strengthen relational command.

This is not about becoming harsher. It is about becoming structurally clearer.

It is about learning when softness is sovereign and when it has become appeasement, when directness is clean and when it has become defense, and how to communicate with power without abandoning regulation, ethics, or self-respect.

Some sections may feel immediately empowering. Others may expose patterns that have been protected by professionalism, politeness, survival strategy, or habit. Let that information arrive without collapsing into judgment. Data is not an indictment. It is material for governance.

Proceed deliberately. The objective is not to sound powerful. The objective is to become internally organized enough that your communication carries authority without requiring performance.

Thank you for being here.

May this protocol strengthen your relational command, refine your soft power, and support a form of authority that is regulated, ethical, embodied, and unmistakably your own.

Azari Solenne

WELCOME

How to Use This Protocol

Your guide to moving from insight to integration

This protocol is the companion to The Authority Framework. It is designed to move you beyond reading and into real, lived transformation. Each section contains the full literature, followed by reflection prompts, self-assessment exercises, and action planning worksheets.

There is no rush. Return to these pages as many times as you need. Your honest engagement with these exercises, not perfection, is what creates change.

"Power without regulation is simply chaos dressed up as confidence."

- The Soft Power Communication Playbook

GOVERNANCE NOTE: THE PHASE 4 PREREQUISITE

This is the culmination of Phase 4: Relational Command. You have secured your biology (Phase 1), mapped your identity (Phase 2), built your execution engine (Phase 3), and calibrated your internal signal. Now, you project that power outward.

If you have not completed the prior phases, do not proceed. You cannot hold authority in a room if you do not hold authority over your own nervous system.

YOUR PROTOCOL AT A GLANCE

- Section I: The Foundational Pre-Requisite - The biology of communication
- Section II: Maladaptive Communication Personas - Identifying your default defense
- Section III: The Integrity Compass - A pre-communication filter
- Section IV: Verbal Architecture - Language alchemy in practice
- Section V: Tactical Execution - The playbook in action
- Section VI: Ecosystem Progression - Your next step to self-mastery

NOTE: A NOTE BEFORE YOU BEGIN: Approach every prompt with radical honesty. The insights that feel the most uncomfortable are often the most valuable. This is a structured space for your truth.

SECTION I

The Foundational Pre-Requisite

The Biological Reality of Communication

Section I: The Foundational Pre-Requisite

Your nervous system is the silent co-author of every conversation you have. When your system is dysregulated, your message gets hijacked regardless of how sound your intentions are or how logical your argument may be.

Most women attempt to resolve conflict by choosing the perfect words. This is a strategic failure. In this framework, communication is treated as **heavily state-dependent: regulation shapes how language is delivered, received, and interpreted**. Your ability to maintain a regulated nervous system is what allows your words to be perceived as safe, credible, and influential. If your somatic state is one of stress or

defensiveness, your message will land as a threat, triggering the other person's biological defenses. Power without regulation is simply chaos dressed up as confidence.

THE DEFINITION OF SOFT POWER

Soft power is frequently misunderstood as being nice, accommodating, or submissive. It is none of those things. **Soft power is the ability to influence and attract others to your point of view through your presence, integrity, and communication style**, rather than relying on coercion, manipulation, or command.

True impact does not come from force; it originates from a grounded presence and authentic connection. The most influential people do not need to command a room; they anchor it with their presence.

THE SOFT POWER DISTINCTION: VENTRAL VAGAL VS. SYMPATHETIC

Soft power is a Ventral Vagal state: regulated, connected, and safe enough to influence without force. This is the state from which your authority becomes magnetic rather than threatening.

Hard power is a Sympathetic state: panicked, loud, demanding, and structurally incapable of co-regulation. Hard power may produce compliance; it does not produce trust. The distinction between soft power and hard power is not personality. It is biology.

THE MANDATE OF CO-REGULATION

The primary goal in any challenging interaction is to lower the threat level. Through the biological mechanism of neuroception, first communicate safety with your body by using a calm tone and open posture before you attempt to communicate information with your words.

This is the ultimate tool for de-escalating conflict: **co-regulation**. Co-regulation is the process where one regulated nervous system gently influences and calms another by providing a biological cue of safety. When you master your internal state, your quiet stability becomes the anchor for the entire conversation. You do not fight their chaos; you lead them out of it.

"The most influential people do not need to command a room; they anchor it with their presence."

- The Soft Power Communication Playbook

Section I Exercises

Self-Assessment: Your Nervous System Awareness

Rate each statement honestly. 1 = Rarely | 2 = Sometimes | 3 = Often | 4 = Almost Always

Statement	1	2	3	4
I can recognize when my body is in a stress response (tight chest, shallow breath, clenched jaw) during a conversation.	☐	☐	☐	☐
I am able to pause and regulate myself before responding in a tense moment.	☐	☐	☐	☐
My tone and body language communicate calm and safety to others, even in conflict.	☐	☐	☐	☐
I am aware of the effect my emotional state has on the people around me.	☐	☐	☐	☐
I actively practice self-regulation tools (breathwork, grounding, pause) in my daily life.	☐	☐	☐	☐

NOTE: REFLECTION PROMPTS - SECTION I

- Describe a recent conversation where you felt dysregulated. What physical sensations did you notice in your body?
- What does soft power mean to you personally, in your own relationships or professional life?
- Who in your life demonstrates co-regulation naturally? What does their presence feel like?
- Describe the last time you communicated from a sympathetic state. What was the outcome? What would a Ventral Vagal response have looked like instead?

Your reflections:

SECTION II**Maladaptive Communication Personas**

The Defense Mechanisms of Dysregulation

Section II: Maladaptive Communication Personas

You do not master your voice until you master the biology driving it. When your nervous system detects a threat, it bypasses your rational mind and defaults to an unconscious stress response. These are not aspects of your true personality; they are **maladaptive communication personas** born from past experiences and a biological drive to stay safe.

When you communicate from a dysregulated state, you will inevitably default to one of the following four defense mechanisms. True self-mastery requires you to identify your default setting so you can consciously regulate it, rather than allowing it to hijack your interactions.

FAWN RESPONSE The Pleaser

Biological Drive: Appeasement to prevent attack. Your system is highly attuned to the emotions of others, leading with a desperate desire to maintain harmony and avoid conflict at all costs.

Somatic Signature: You frequently concede your own needs to ensure the comfort of others. Body language becomes small, apologetic, or overly open, while tone wavers or remains artificially soft.

Relational Cost: A systemic inability to set boundaries, leading to deep, suppressed resentment.

FIGHT RESPONSE - DEFIANCE The Rebel

Biological Drive: Defensiveness to prevent subjugation. Energy defined by fierce independence and an absolute resistance to being controlled.

Somatic Signature: You meet requests or feedback with defiance to prove your strength. Tone becomes sharp, and posture is typically closed or defensive.

Relational Cost: A chronic tendency to push people away, resulting in an inability to collaborate and an underlying feeling of isolation.

FIGHT RESPONSE - RIGIDITY The Controller

Biological Drive: Domination to prevent chaos. Your system focuses entirely on maintaining order and control, demanding predictability and becoming highly rigid the moment a situation feels uncertain.

Somatic Signature: Communication is direct, commanding, and actively lacks warmth. Body language is firm and closed off to incoming feedback.

Relational Cost: Severe inflexibility, an inability to trust others, and a tendency to dominate rather than participate in conversations.

FREEZE RESPONSE The Withdrawer

Biological Drive: Disengagement to survive overwhelm. Defined by a desire for peace and solitude, leading to complete disengagement from conflict and difficult situations.

Somatic Signature: You physically or emotionally retreat when confronted. Tone drops to a monotone or quiet level, and body language is highly reserved.

Relational Cost: An inability to be vulnerable, a chronic fear of confrontation, and a tendency to ghost or avoid necessary interactions.

CLINICAL UPGRADE: THE SYSTEMIC MASKING CLAUSE

In hostile or systemic environments, particularly for women navigating heavily male-dominated spaces or structurally unsafe rooms, these personas are not always trauma responses. They are sometimes requirements for survival.

Strategically deploying a Controller or Pleaser persona to move through a hostile room is not failure. It is survival intelligence, which is an advanced skill. The difference between trauma and governance is **choice**.

The failure occurs when the persona deploys automatically and you cannot turn it off when you are safe. This distinction directly connects to Framework II: The Masking Economy System (MES-1). Strategic masking is a tool. Automatic masking is a wound. This protocol helps you tell the difference.

Section II Exercises**Self-Assessment: Identifying Your Default Persona**

Mark every statement that resonates with you. Be honest; there are no wrong answers.

THE PLEASER	THE REBEL
☐ I often say yes when I want to say no. ☐ I apologize frequently, even when I have done nothing wrong. ☐ I feel responsible for managing other people's emotions.	☐ I push back instinctively when someone tries to tell me what to do. ☐ I can be defensive even when criticism is constructive. ☐ Sometimes I feel that people do not understand or appreciate me.
THE CONTROLLER	THE WITHDRAWER
☐ I find it hard to delegate because I worry things will not be done correctly. ☐ Uncertainty or unpredictability makes me anxious or sharp. ☐ People have told me I can come across as cold or demanding.	☐ I shut down or go quiet during conflict rather than speaking up. ☐ I avoid difficult conversations until they become impossible to ignore. ☐ I often feel unseen or misunderstood because I do not share what I really feel.

NOTE: REFLECTION PROMPTS - SECTION II

- Which persona do you default to most often? Does this shift depending on who you are with (partner, employer, parent, friend)?
- What early experience or relationship do you think shaped this pattern?
- What would it look like to respond from a place of regulation instead of this persona?
- Have you ever strategically deployed one of these personas in a hostile or high-stakes

environment? What was the outcome? Did you feel in control of the mask, or did it take over?

Your reflections:

SECTION III

The Integrity Compass

The Pre-Communication Filter

Section III: The Integrity Compass

Every word you speak or write carries an energetic weight. When your message is out of alignment with your truth and values, it ceases to be communication and becomes manipulation, even if unintentional.

Before you initiate any high-stakes conversation, hit send on a critical message, or speak in a moment of tension, run your intent through a structural audit. **Self-mastery means refusing to weaponize your words, even when you are actively triggered.** The Integrity Compass is your filter for power that lands clean, ensuring you speak with an integrity that does not shrink or self-righteously explode.

T TRUTH - AUTHENTIC ALIGNMENT

The Check: Is this message honest and authentic to you? Are you saying what you actually mean, or are you performing to say what you think the other person wants to hear?

The Directive: If you are performing, realign with your truth. Speaking with integrity requires you to own your perspective fully, without apology or exaggeration.

T TIMING - STRATEGIC ASSESSMENT

The Check: Is this the right moment? Are you communicating because you have been triggered and need to vent, or because the time is genuinely right for a productive conversation?

The Directive: Assess the biological state of the other person. If they are dysregulated, they are not in a state to receive. Sometimes the most powerful action you can take is to wait.

T TONE - THE CONTAINER

The Check: Is your tone grounded and respectful? Does your message sound accusatory or defensive? In person, are your posture and facial expressions open or closed?

The Directive: A message delivered with a sharp tone is unlikely to be received as a kind one. Your tone is the container for your truth; if the container is broken, the message leaks.

T TENDERNESS - RELATIONAL EMPATHY

The Check: Are you holding space for their humanity and your own? Are you seeing the other person as a human being with their own triggers, or simply as an obstacle?

The Directive: Approach the conversation with objective compassion for both parties, acknowledging that we are all operating within the limits of our current nervous system regulation.

Section III Exercises

NOTE: REFLECTION PROMPTS - SECTION III

- Think of a message you sent recently that did not land the way you intended. Which of the four T's was misaligned: Truth, Timing, Tone, or Tenderness?
- Is there a conversation you have been avoiding? Run it through the Integrity Compass right

now. What do you notice?

- When do you find it hardest to speak with tenderness? What is usually happening inside you in those moments?

Your reflections:

ACTION PLANNING: INTEGRITY COMPASS WORKSHEET

Identify one or two conversations coming up in the next 7 days. Apply the Integrity Compass to each one below.

The Conversation	Truth Check	Timing Check	Tone Check	Tenderness Check

SECTION IV

Verbal Architecture

Language Alchemy: The Transmutation of Weak Language

Section IV: Verbal Architecture

Words create realities, build connections, and hold immense structural power. Yet most women dilute their message with passive language, unnecessary disclaimers, and reflexive apologies. **Self-mastery means speaking with clarity, command, and consequence.** The practice is to strip your voice of fluff and reclaim the kind of language that does not beg for approval; it declares truth. No disclaimers. No soft landings. Just impact.

CLINICAL UPGRADE: THE BIOLOGY OF THE APOLOGY

The Seven Sins of Weak Language are not character flaws. They are biological Fawning strategies. Qualifiers, disclaimers, and reflexive apologies are the nervous system's attempt to lower the perceived threat level of the listener. When a woman says "I'm sorry to bother you," she is not being weak; she is executing an unconscious survival protocol designed to prevent the listener from attacking.

Reclaiming your language requires your nervous system to tolerate the vulnerability of directness without apology. This is not a linguistic task. It is a somatic one. You cannot simply decide to speak differently; you first need enough internal safety to tolerate the silence that follows a clean, unhedged statement.

THE SEVEN SINS OF WEAK LANGUAGE

Before you can create potent communication, identify and remove the linguistic habits that drain your relational authority.

1	Apologizing: Using phrases like "I'm sorry to bother you" when you have not committed an error. This immediately places you in a subordinate position and signals to the listener that your words carry less weight than theirs.
2	Diluting: Adding qualifiers such as "just," "maybe," or "I think" to your statements. These words soften your message and biologically signal a lack of conviction to the listener.
3	Asking for Permission: Starting a sentence with "Can I ask a question?" instead of simply stating the question. You are powerful enough to speak without an invitation.
4	Fluff and Filler: Using unnecessary conversational padding like "to be honest," "at the end of the day," or "in my opinion." These add no informational value and dilute your core message.
5	Passive Voice: Using constructions like "A decision was made" instead of "I made a decision." This structurally removes your ownership and erases your agency from the record.
6	Question-Based Statements: Posing a question when you are making a declarative statement, for example adding "Does that make sense?" to the end of a directive. This functions as a subtle plea for validation.
7	Over-Explaining: Providing too many details or justifications for a simple request or boundary. Your no and your yes are complete sentences. Explanation beyond what is necessary signals insecurity.

THE REWRITE PROTOCOL: THE COMMAND EXERCISE

Language alchemy is the practice of intentional transmutation. To eliminate weak language, run your initial thoughts through this three-step structural filter before you speak or write.

STEP 1	STEP 2	STEP 3
Initial Thought	Fluff Removal	The Final Command
<i>What is the raw message you want to communicate?</i>	<i>Systematically strip all qualifiers, apologies, and unnecessary words.</i>	<i>What is the most direct, complete version of this message?</i>

EXAMPLES OF TRANSMUTATION

Weak Language (Before)	Potent Language (After)
"I just wanted to check in."	"I am checking in about [specific topic]."
"I'm sorry, can I ask a quick question?"	"I have a question."

"I think we should probably go with option A."	"We are moving forward with option A."
"Does that sound okay?"	"What are your thoughts?"
"I don't know if this makes sense, but maybe..."	"Here is my assessment:"
"Sorry for the long email..."	"This requires detail. Here it is."

Section IV Exercises

NOTE: REFLECTION PROMPTS - SECTION IV

- Which of the Seven Sins do you use most frequently? In what situations does it appear most?
- When you speak powerfully and directly, how does your body feel differently compared to when you dilute your message?
- Write three statements you need to make this week. First write them in your habitual weak language, then rewrite them in potent language using the Command Exercise.
- What does your nervous system fear will happen if you speak without hedging? Name the specific threat your biology is trying to prevent.

Your reflections:

SECTION V

Tactical Execution

The Application of Relational Command

Section V: Tactical Execution

Understanding the biological and linguistic foundations of soft power is insufficient without behavioral application. The following tactics are your **operational playbooks for high-stakes interactions**. They are designed to be executed from a regulated baseline, allowing you to govern external friction with grace and absolute firmness.

TACTIC 1 The Structural Boundary (The Soft No)

Boundaries are acts of self-preservation that protect your energetic capacity. Communicating them effectively requires you to eliminate the need to over-explain or apologize. A structural boundary is firm, brief, and leaves no room for negotiation.

Formula: Acknowledge (Optional) → Clear No → Brief Reason (Optional)

Example: "I appreciate you asking me to take on that extra project, but I will not be able to. I need to protect my focus to ensure my current commitments are executed well."

TACTIC 2 The Pause and Pivot

In heated moments, the biological impulse to react, to lash out, defend, or shut down, is intense. Soft power requires you to structurally insert a gap between the stimulus and your response. This gap is where your authority lives. The pause is not weakness; it is the moment you choose governance over reaction.

Formula: *Pause → Notice → Choose Response*

PAUSE

Take a conscious breath. Even a one-second pause is a powerful pattern interrupt. Place your hand on your heart or abdomen to physically anchor yourself back into your body.

NOTICE

Observe the emotion or physical sensation present without judgment. Name it internally: anger, fear, shame, grief. Naming reduces the biological charge.

CHOOSE

Ask yourself what response aligns with your soft power and will create understanding rather than additional conflict.

TACTIC 3 The Soft Ask (Executing Influence)

Influence is not manipulation; it is clear, confident communication that invites collaboration. When you make a request, do not waffle, apologize, or assume the answer will be a rejection. State your need with precision and without hedging.

Formula: *Be Clear + Be Concise + Be Confident*

Example: "I need your support with [specific task] by [specific deadline]. Are you able to assist?"

TACTIC 4 Conflict Navigation

Conflict is inevitable; how you navigate it determines your relational authority. Soft power keeps you grounded and solution-oriented rather than pulled into the emotional current of the interaction. By focusing on shared outcomes, you invite collaboration rather than fuel opposition.

Formula: *Stay Grounded → Listen to Understand → Express via I-Statement → Invite Collaboration*

Example: "When [you do a specific thing], I feel [a specific emotion]. What I need is [a specific action or change]. How can we find a solution that works for both of us?"

Section V Exercises

SCRIPT PRACTICE: WRITE YOUR OWN

Using the formulas from each tactic, write your own personalized scripts for real situations in your life right now.

NOTE: TACTIC 1 - MY BOUNDARY SCRIPT

Situation I need to set a boundary around:

NOTE: TACTIC 3 - MY SOFT ASK SCRIPT

Something I need to ask for this week:

NOTE: TACTIC 4 - MY CONFLICT NAVIGATION SCRIPT

A situation currently causing tension:

NOTE: REFLECTION PROMPTS - SECTION V

- Which of the four tactics feels most natural to you? Which feels most challenging?
- Describe a past situation where you reacted instead of responded. How would you handle it differently using the Pause and Pivot?
- What has historically made it difficult for you to set boundaries clearly? What might be different now?
- When is your conflict navigation most vulnerable? What biological state are you typically in

when conflict escalates?

Your reflections:

SECTION VI

Ecosystem Progression
The Strategic Expansion: Identity Integration

Section VI: Ecosystem Progression

You have now established the protocols to govern your external interactions. You understand that a regulated nervous system is the prerequisite for authority, and you possess the linguistic architecture to navigate friction and enforce boundaries without emotional escalation.

You have secured your biology, mapped your identity, built your execution engine, and mastered your relational command. The architecture is complete. Now, protect and reinforce it over time.

THE BRIDGE TO THE APEX

You have secured your biology, mapped your identity, built your execution engine, and mastered your relational command. The architecture is complete. Now, protect and reinforce it over time.

Proceed to the capstone of the Distinct Character Ecosystem: The 30-Day Sovereignty Protocol. This is where theory becomes permanent reality.

NOTE: MY CLOSING REFLECTION

- Who will you be in your relationships when you have fully embodied soft power? Describe her in vivid detail.
- What is the one conversation, boundary, or ask you have been postponing that you will take action on this week?

Your vision:

"You do not fight their chaos. You lead them out of it."

- Distinct Character

Therapeutic Addendum

A Clinical Companion for Mental Health Practitioners

PRACTITIONER GUIDANCE NOTE

This addendum is designed for licensed mental health practitioners, coaches, and facilitators who are integrating The Authority Framework into their clinical or professional practice. The content below provides clinical framing, trauma-informed context, and session integration guidance corresponding to each section of the primary protocol.

Section I: Clinical Context for the Nervous System Framework

The operational premise of this protocol is that relational communication is heavily shaped by regulation state, not vocabulary alone. This draws from Polyvagal-informed models and neuroscience on threat response. When working with clients through Section I, practitioners should note the following clinical considerations.

- **Neuroception assessment:** Before assigning the Section I self-assessment, practitioners may benefit from conducting a brief somatic check-in. Clients with complex trauma histories may have altered threat and safety detection patterns, making accurate self-rating more difficult.
- **Ventral Vagal capacity:** The distinction between Ventral Vagal (soft power) and Sympathetic (hard power) states introduced in this section can be mapped onto Polyvagal-informed therapeutic frameworks. Practitioners working with trauma should introduce this distinction carefully and ensure clients have adequate window of tolerance before engaging with the material.
- **Co-regulation as therapeutic support:** The Mandate of Co-Regulation is not only a communication skill; it can be therapeutically relevant when used within appropriate professional scope. Practitioners who model co-regulation in session provide direct somatic experience of what this skill feels like, which can be more useful than written instruction alone.

Section II: Clinical Context for Maladaptive Personas

The four Maladaptive Communication Personas (The Pleaser, The Rebel, The Controller, The Withdrawer) can reflect behavioral expressions of threat-response patterns. In clinical practice, these may overlap with trauma-response categories such as fawn, fight, and freeze patterns, while still requiring individualized assessment.

Practitioner Integration Notes:

- The Systemic Masking Clause is a critical clinical distinction. When working with women of color, women in high-authority professional environments, or clients with marginalized identities, practitioners should explicitly validate that strategic persona deployment is not pathological. The clinical objective is to help the client develop meta-awareness: the capacity to know which persona they are deploying, and why.
- Clients who identify primarily with The Controller or The Rebel may present resistance to the framing of soft power as superior. This resistance is data. Explore the survival history behind the hard-power preference before attempting to shift the behavior.
- The self-assessment in this section should not be interpreted as fixed typology. Clients typically move between personas depending on context. The therapeutic goal is increasing flexibility and conscious choice, not eliminating default patterns.

Section III: Clinical Context for the Integrity Compass

The Integrity Compass is a structured pre-communication filter rooted in values clarification and mindful communication. Its four components (Truth, Timing, Tone, Tenderness) function as an abbreviated DBT-informed STOP skill applied to relational interaction.

- Truth: Practitioners can use this dimension to explore values clarification with clients. Clients who struggle with the Truth check are often in conflict between their authentic response and the response they believe is expected of them.
- Timing: The Timing check is particularly relevant for clients with trauma histories, as dysregulated clients frequently initiate difficult conversations when they are most flooded. Practitioners can help clients develop a somatic anchor for Timing: the ability to physically sense whether they are in a state to communicate productively.
- Tone and Tenderness: These two dimensions are the container and the relational orientation of communication. Practitioners working with clients who have attachment injuries may find that Tenderness is the most challenging dimension, as it requires extending compassion to the person who has triggered them.

Section IV: Clinical Context for Verbal Architecture

The Seven Sins of Weak Language are not only stylistic preferences; they can reflect somatic, relational, and learned safety patterns. Practitioners should frame language transformation as nervous-system informed communication practice, not simple behavioral correction. The biology of the apology, described in the clinical upgrade within this section, provides the therapeutic context that allows clients to engage with language change without shame.

- Practitioners should expect resistance during language work. When clients are asked to drop qualifiers and apologies, their nervous system registers this as increased exposure and vulnerability. This is a therapeutic edge, and it should be treated as such.
- The Rewrite Protocol (Command Exercise) can be used as a session activity. Have the client write a real statement they need to deliver, run it through the three steps in real time, and then rehearse the final command aloud. The practitioner's co-regulatory presence in this moment can be clinically useful.
- Practitioners should normalize the discomfort of potent language by naming it explicitly: speaking without hedging creates a vulnerability that the nervous system perceives as threat. The therapeutic work is to widen the window of tolerance for this vulnerability over time.

Section V: Clinical Context for Tactical Execution

The four tactics in this section (Structural Boundary, Pause and Pivot, Soft Ask, Conflict Navigation) are behaviorally grounded communication skills. In clinical practice, each tactic can be integrated into role-play exercises, exposure hierarchies, and between-session behavioral assignments.

- The Structural Boundary is one of the most clinically relevant skills in this protocol for clients with a history of fawning, codependency, or trauma-based compliance. Practitioners should assess the client's window of tolerance for boundary delivery before assigning this tactic. For highly activated clients, begin with imaginal rehearsal before live application.
- The Pause and Pivot directly targets the reactivity cycle that is the source of most relational ruptures for dysregulated clients. This tactic is most effective when it is supported by an established somatic regulation practice (breath, grounding, body scan).
- Conflict Navigation can surface significant attachment material. Practitioners should monitor for clients who experience the I-Statement formula as emotionally exposing or dangerous. The formula creates a vulnerability gap between naming an emotion and requesting a need. For clients with insecure attachment, this gap can feel acutely threatening.

CLIENT ASSESSMENT TEMPLATE

For practitioner use. To be completed during or following initial review of the protocol with your client.
